

## Inspection Report

Auburn University  
Office Of Vice Pres For Research  
202 Samford Hall  
Auburn, AL 36849

Customer ID: 833  
Certificate: 64-R-0005  
Site: 001  
BIOLOGICAL RESEARCH FACILITY

Type: ROUTINE INSPECTION  
Date: 11-MAY-2016

### 2.33(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

\*\* In the Equine Therio Barn there were three bottles of medication (Sucralfate 4/16, Gentamicin 4/16 and Phenylbutazone 3/16) that had expired. The use of medications that are past the expiration date printed on the label may not be safe or efficacious and is not considered to be an acceptable practice. The facility needs to review their current procedures for monitoring drugs and medical supplies to ensure that all medications to be used on research animals are not out-dated. It was corrected immediately by discarding the expired drugs.

\*\* At the Pathogen-free Swine facility there were two pigs (#344/#341) that had an altercation. Pig #344 acquired bruising to the right shoulder area in a circular fashion about 10 inches in diameter. Pig #341 had superficial cuts on the top aspect of his nose extending right beneath its eyes. The facility must have these animals examined by the attending veterinarian in order to ensure that an accurate diagnosis is obtained and an appropriate treatment plan is developed and followed. The facility must document this information and make it available to the inspector upon request. The applicant must ensure that all animals receive adequate veterinary care at all times and in a timely manner. Correct from this day forward.

At the Sugg facility there was a male Jacob sheep that had a third horn that had grown in a hook like fashion. The sheep could potentially catch the horn on the fencing and injure itself. The facility needs trim the horns and maintain them at a safe length to prevent injury. The facility must ensure that all animals receive adequate veterinary care at all times. Correct by 5/20/2016

### 3.125(a) REPEAT

#### FACILITIES, GENERAL.

\*\* At the Satellite Equine facility, in the pasture with the horses, there was fencing wrapped around the trees that had pointy ends. This wire could potentially injure the animals and should be removed and/or repaired.

The inspection was conducted with the University Veterinarian. The exit interview was conducted with the University Veterinarian and the Assistant Director.
