Type: ROUTINE INSPECTION  
Date: 11-SEP-2019

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The licensee has two capybara. One of the capybara appears to have a slight limp and has red, inflamed skin between its back legs. The licensee was notified of this problem approximately 2 weeks ago by a patron. The licensee had not notified the attending veterinarian of this veterinary issue with the capybara until inspection.

Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include: The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care.

It is the licensee responsibility to notify the attending veterinarian at the first sign of a veterinary problem with any animal held at the facility. This must be done so that the attending veterinarian has the opportunity to diagnose the animals condition and recommend treatment for the animal. This must be done to prevent pain, suffering and/or death.

The licensee contacted the attending veterinarian at time of inspection.

### 3.27(b)

#### FACILITIES, OUTDOOR.

The licensee is currently housing 4 guinea pigs outdoors. The temperature today was 84 degrees. The temperature with humidity/dew point was 88 degrees. The licensee stated that he was aware that this was a violation but stated he had no where to put the guinea pigs.

Guinea pigs shall not be housed in outdoor facilities unless such facilities are located in an appropriate climate and prior approval for such outdoor housing is obtained from the Deputy Administrator.

Either move the guinea pigs indoors or request a variance to house guinea pigs outdoors.

## Inspection Report

---

To be corrected by end of business September 12, 2019

### 3.85 CRITICAL

#### EMPLOYEES.

One of the licensees animal caretakers has been bitten for a second time by a black and white ruffed lemur.

Every person subject to the Animal Welfare regulations (9 CFR parts 1, 2, and 3) maintaining nonhuman primates must have enough employees to carry out the level of husbandry practices and care required in this subpart. The employees who provide husbandry practices and care, or handle nonhuman primates, must be trained and supervised by an individual who has the knowledge, background, and experience in proper husbandry and care of nonhuman primates to supervise others. The employer must be certain that the supervisor can perform to these standards.

The licensee did make a change in the enclosure after the first bite by adding a trap door to be used to feed and water the lemurs without going into the enclosure. This change did not prevent the caretaker from being bit a second time.

It is the licensees responsibility to train all employees in husbandry and handling practices to prevent animal bites. Enclosures must also be designed and constructed to ensure the safety of employees.

To be corrected by September 19, 2019.

### 3.133

#### SEPARATION.

The licensee has a sitatunga and a male, alpaca housed in the same enclosure. The sitatunga has hair loss and a few minor scabs. The licensee stated that alpaca has been picking on the sitatunga.

Animals housed in the same primary enclosure must be compatible. Animals shall not be housed near animals that interfere with their health or cause them discomfort.

The sitatunga and alpaca must be separated to prevent further injury and discomfort for the sitatunga.

To be corrected by end of business September 12, 2019.

This inspection and exit interview were conducted with the licensee.
