

## Inspection Report

Kristina Oliver  
3700 Tepusquet Rd  
Santa Maria, CA 93454

Customer ID: **7940**  
Certificate: **93-C-0575**  
Site: 005  
KRISTINA OLIVER

Type: ROUTINE INSPECTION  
Date: 04-DEC-2018

### 2.75(b)(1)

#### RECORDS: DEALERS AND EXHIBITORS.

The record of animals being kept at the facility was incomplete, with only the number and gender of the animals listed.

Animal records should include:

- (i) The name and address of the person from whom the animals were purchased or otherwise acquired;
- (ii) The USDA license or registration number of the person if he or she is licensed or registered under the Act;
- (iii) The vehicle license number and State, and the driver's license number (or photographic identification card for nondrivers issued by a State) and State of the person, if he or she is not licensed or registered under the Act;
- (iv) The name and address of the person to whom an animal was sold or given;
- (v) The date of purchase, acquisition, sale, or disposal of the animal(s);
- (vi) The species of the animal(s); and
- (vii) The number of animals in the shipment.

The licensee should ensure that appropriate animal records are kept and made available to APHIS officials during inspections.

Correct by December 27, 2018.

### 3.127(b) REPEAT

#### FACILITIES, OUTDOOR.

There was no shelter from inclement weather in an enclosure housing three camels.

The inability to take shelter from rain, especially cold seasonal winter rains, could cause discomfort to the animals and adversely impact their health. The licensee stated that she submitted fecal samples to a veterinary lab after

## Inspection Report

---

noticing one of the animals had lost weight. She was told by the lab that whip worms were detected in at least one sample. Health conditions (such as weight loss and parasite burdens) may be exacerbated by wet and cold conditions.

The facility should ensure that animals housed at the facility have access to shelter that will adequately protect them from inclement weather.

### 3.129(a)

#### FEEDING.

Three camels were being fed directly on the ground. There were no feeders in the enclosure and hay was mixed in mud inside the enclosure where the animals were being fed. The licensee fed hay directly on the ground in a different location during the inspection. The ground inside the enclosure was soft because of rain in November. Additionally, the licensee stated that fecal samples obtained from the camels had tested positive for whip worms approximately three weeks prior to the inspection.

Food should be wholesome, palatable, and free from contamination. Food may become contaminated when fed directly on the ground, especially given the history of an intestinal parasite infection. Additionally, food may be less palatable when mixed with mud and fecal material.

The licensee should ensure that the animals are fed in a manner that it wholesome, palatable, and free from contamination.

Correct by December 27, 2018.

This inspection and exit interview were conducted with a facility representative.
