

## Inspection Report

Sandcastle Inc.  
1199 Pale San Vitores Road  
Tumon, GU 96911

Customer ID: **12024**  
Certificate: **97-C-0004**  
Site: 001  
SANDCASTLE, INC. - GUAM

Type: ROUTINE INSPECTION  
Date: 21-APR-2015

### 2.40(a)(1) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There is no written Program of Veterinary Care that covers the animals at the Cultural Park and no record that the attending veterinarian has visited the site. A staff member stated that the veterinarian would be going to the site the morning following the inspection.

The facility should ensure that all animals being exhibited are under the care of the Attending Veterinarian. The Attending Veterinarian should visit the site to inspect the animals, review husbandry practices, and, together with the licensee, develop a written Program of Veterinary Care that addresses preventive care and other issues that will ensure the health and well-being of the animals being exhibited.

Previous correction date: To be corrected by 9/25/14.

### 2.75(b)(1)

#### RECORDS: DEALERS AND EXHIBITORS.

Current animal records were not available for review at the time of the inspection. While the tiger records are up to date, there are no records for any animals housed at the Cultural Park. A system should be in place to ensure that complete acquisition and disposition records are maintained and made available for examination by APHIS officials.

Correct by May 22, 2015.

Prepared By: MARCY ROSENDALE, D V M USDA, APHIS, Animal Care

## Inspection Report

---

### 3.125(a)

#### FACILITIES, GENERAL.

The tips of two screws were protruding approximately one inch into the pig enclosure where it appeared they had been placed to secure a now missing piece of board. The tip of a shorter nail or screw was protruding into the enclosure from a different board.

Sharp objects may cause injuries to the animals. Animal enclosures should be maintained in good repair to protect the animals from injury.

Correct by April 23, 2015.

### 3.130

#### WATERING.

The water container for the pigs was sitting in a muddy area and contained muddy water. This was the only water source for the animals.

Dirty water may be less palatable to the animals. Drinking insufficient amounts of water may adversely affect the health of animals. Drinking contaminated water may also adversely affect the health of the animals.

Corrected at the time of the inspection.

### 3.131(c)

#### SANITATION.

Two approximately three inch long nails had been left on top of the roof of a small shelter in the goat enclosure. The nails were within reach of the goat. Animal enclosures should be kept free of construction materials and any other debris that could be harmful to the animals.

Corrected at the time of the inspection.

An exit briefing was conducted with a facility representative.
