Type: ROUTINE INSPECTION  
Date: 08-JUL-2014

### 2.40(b)(2) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

\* A cream colored adult female Lhasa Apso (microchip number 068 825 363) has a growth under her belly. The growth is hanging about two inches below the normal body frame, soft and approximately four inches long. The breeder has talked to her veterinarian about this, but no diagnoses have been made. The breeder said the dog had this growth about a year ago and it is getting bigger. The dog owner must take this dog to a veterinarian and get a good evaluation of this dog to insure that the proper and best care for this dog is being given.

\* A reddish/blond Pekinese (microchip number 101 258 797) has an open wound on the top side, between her second and third toes of her left front foot. The open wound is red and oozing. Open wounds with no veterinarian care can become infected, painful, and lead to more permanent paralysis. The breeder must have this open wound seen by a veterinarian. The breeder needs to develop a plan to actively inspect all dogs on a daily basis. Have in place a procedure set up by the attending veterinarian that correctly medicates open wounds, keep a record of what is being done and have it available for the inspector to see during the inspection process.

### 3.1(c)(1)(2)

#### HOUSING FACILITIES, GENERAL.

\* The four pens against the east inside wall of the sheltered facility have aluminum corners dogs have chewed leaving sharp points. Sharp points can injure dogs. The licensee must remove, replace or repair these areas that have sharp points. This will help ensure dogs are in a safe environment and also help in the proper cleaning and sanitizing of these areas. The licensee needs to also put into place a good maintenance program. Correct by 07-22-2014

### 3.1(c)(2) REPEAT

#### HOUSING FACILITIES, GENERAL.

\* The lower third of the galvanized sheet of tin attached to the east side of the exterior wall of the sheltered facility is rusted; Rust is covering an estimated 20 to 30 percent of the surface area of four enclosures where dogs are. Surfaces not maintained on a regular basis cannot be readily cleaned and sanitized. The licensee must ensure that all surfaces are maintained on a regular basis so those surfaces can be readily cleaned and sanitized at all

## Inspection Report

---

times or be replaced when worn. The licensee must remove, paint, or repair this part of the siding that is rusty to help insure that good cleaning and sanitizing practice can take place to help maintain a disease free environment for dogs.

### 3.6(a)(2)(12)

#### PRIMARY ENCLOSURES.

\* The plastic coated wire flooring of the outside dog runs on the south side of the sheltered facility is losing its covering. Wire flooring that is not at least a diameter of 9 gauge must be coated with a material such as plastic or fiberglass. Inadequate flooring can lead to sore feet and open wounds. Dogs must have safe flooring to stay healthy and comfortable. The licensee must repair or replace the areas of flooring that are not adequately coated. Correct by 09-08-2014

### 3.11(c) REPEAT

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

\* Dust, cobwebs and dog hair were accumulating on the interior walls, ceiling and enclosure pens of the sheltered facility. This indicates a living area exists for rodents, other pests and other vermin. Unsanitary living conditions are created if the building is not kept clean and this could lead to health issues for the dogs. The licensee needs to put into place a good program that continually keeps areas where dogs are clean of cobwebs. Also, surfaces where dogs come into contact must be cleaned and sanitized at least once every two weeks and more often if needed to help maintain a disease free facility for dogs. The licensee must clean/remove the cobwebs from the inside of the sheltered facility where dogs are housed

### 3.12

#### EMPLOYEES.

This kennel facility does not have enough employees to adequately in a timely manner take care of the maintenance and daily routines that a kennel of this size requires. Each facility subject to the Animal Welfare regulations maintaining dogs must have enough employees to carry out the level of husbandry practices and care required. Correct by 10-08-2014

This inspection and exit briefing were conducted with the owner.
