

Inspection Report

Seneca Ridge Inc
811 Blacks Hill Rd
Great Falls, VA 22066

Customer ID: **2472**
Certificate: **52-C-0018**
Site: 001
SENECA RIDGE INC

Type: ROUTINE INSPECTION
Date: 16-JUL-2024

3.13(a)

Veterinary care for dogs.

The facility's program of veterinary for dogs is incomplete and does not contain all the required information. There is no specific vaccination schedule stated for distemper, parvo, or rabies virus vaccines. Additionally, the program does not contain the testing frequency to monitor internal parasites such as heartworm, intestinal parasites, and external parasites. There is no specific frequency for preventative care and treatment to ensure healthy and unmatted hair coats, properly trimmed nails, and clean and healthy eyes, ears, skin, and teeth. An incomplete program of veterinary for dogs can lead to a negative impact on their health and well-being. Correct by 6 August 2024 by ensuring the program of veterinary care for dogs is complete and contains all the required components.

3.77(a)

Sheltered housing facilities.

The indoor portion of the white-handed gibbon sheltered enclosure is unable to meet the standards for temperature regulation. The ambient temperature was exceeding 100 degrees F and the indoor housing did not have an effective method of controlling high temperatures. During inspection, the temperature on the gauge appeared to be about 96 degrees F. Excessively hot temperatures for non-human primates can lead to overheating and unnecessary discomfort. Correct by 23 July 2024 by ensuring that the sheltered portion of the sheltered housing for non-human primates does not exceed 85 degrees F for more than 4 consecutive hours.

3.127(d)

Facilities, outdoor.

The perimeter fence at the facility has not been maintained to function as a secondary containment system or restrict animals and unauthorized persons from entering the facility. In the llama pasture near the shelter, the perimeter fence is missing multiple metal clips that attach the top of the fence to the supporting fence posts. The top of the fence has started to bend down under the weight of vegetation, no longer maintaining the required height in fencing. Additionally, in the lower left corner of the upper field, a section of three consecutive fence posts is no longer attached to the perimeter chain link fence. Inspectors were able to push down on the top of the fence, away from the posts, creating at least a 3-foot gap. Inadequate perimeter fences can allow predators and other animals or unauthorized people into the facility, which can unnecessarily endanger the animals in the collection. Additionally, the fence no longer serves as a secondary containment, and animals may be able to breach the perimeter of the facility and become harmed or injured. Correct by 6
