Certificate: **87-C-0045**
Site: 001
DENISE Y. ANDERSON

Type: ROUTINE INSPECTION
Date: 13-APR-2015

3.125

FACILITIES, GENERAL.

(a) Structural strength.

***** At time of inspection the pen constructed for the alpacas consisted of cedar post, top and bottom cedar rails covered by livestock field fence. In the center of the pen was a partial wall constructed where the wire had been damaged and trampled to within 18" of the ground and created a potential for injury to the alpacas.

There were several other areas of damage to the wire in the outer walls of the pen which effected the structural integrity of the enclosure and posed a risk for injury.

Several of the top rails of cedar were broken and no longer structurally sound and effected the overall integrity of this pen.

All of the items listed above need to be repaired or replaced to prevent injury to the alpacas and to provide the stuctural integrity to the pen needed to keep the animals contained.

TO BE CORRECTED BY: 7/13/15

This inspection conducted by USDA, APHIS, Animal Care Inspector and the designated person for inspection. The exit interview was conducted by USDA, Animal Care Inspector and the designated person on site and the licensee by phone.

END OF REPORT.
