Type: ROUTINE INSPECTION
Date: 21-AUG-2025

2.40(b)(2)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Three animals were observed to have thinner body condition at the facility; a brown cow, red and white steer, and a fallow deer doe tag#0196. Per representatives the brown cow had been separated to another pasture around August 11 to monitor her grain intake better and provide extra grain. I had concerns with the amount of grain being fed to the brown cow was more than a standard diet and consulted with the attending veterinarian who agreed that the amount of grain described could cause health problems. The red and white steer and fallow deer also have grain and corn as a large portion of their diet. Inappropriate amounts of grain could cause health problems in the mentioned animals. Appropriate diets as guided by the attending veterinarian must be in place for body condition maintenance. The facility must contact the attending veterinarian to evaluate the affected animals and obtain and follow the attending veterinarian's guidance daily to ensure that these animals are receiving an appropriate daily diet.

***Correct by 8/27/2025.

2.75(b)(1)

Records: Dealers and exhibitors.

Records were not up to date to indicate changes in animals numbers at the facility including the number of ducks, peafowl, llamas, goats, Barbados sheep and chickens. Up to date and accurate records can be important for animal husbandry tracking. Records must be kept up to date to reflect dates of acquisition/disposition, name and address from whom animals are acquired or transferred and dates of disposition.

***Correct from 8/21/2025 forward.

2.131(d)(2)

Handling of animals.

Visitors were observed able to feed and pet animals in areas that were not visible to the store manager who also serves as the attendant. A readily identifiable attendant/employee must be present at times of public contact to ensure the safety of the animals and the public. Ensure that a responsible, knowledgeable and readily identifiable employee or attendant is present at all times during periods of public contact.

***Correct by 8/28/2025.

Inspection Report

Facilities, general.

Animal pens had areas in need of repair/maintenance to prevent areas that can cause injury.

- Wood from a broken pallet in the bison pen had nails sticking up.
- A hog panel was on the ground in the brown cow's pen that she could step on.
- Shelters in the sheep pen had rusted edges that were rough/sharp.
- A screwpoint was sticking out of the automatic feeder that goats could touch.
- An old pallet was in front of the drinking area for the white-tailed deer.
- An old broken pallet with exposed nailheads was in the fallow-deer drinking water area.
- Shelters by the pot-bellied pig/billy goat pens had loose chicken wire.

Areas with points, rusted rough edges, and exposed nails can cause injury to animals. Ensure that all areas that animals live in are maintained in good repair to prevent possible injury to animals.

***Correct by 8/25/2025.

3.127(a)

Facilities, outdoor.

The brown cow's pasture lacks adequate shelter from sunlight. There is a shelterbelt of trees that could provide some shade part of the day, but otherwise she does not have access to shade at all times of day. Lack of access to a shade/shelter can cause discomfort to animals. Ensure that an adequate shelter that provides shelter from sunlight is provided.

***Correct by 8/27/2025

3.127(c)

Facilities, outdoor.

The steer and billy goat pen has three areas where excess water has pooled and has green material growing in the pooled water. While the animals have do have access to dry shelter, excess water pooling in their living space can cause disease hazards and increase areas where insect pests can multiply. Ensure to maintain methods to rapidly eliminate excess water from animal living spaces.

***Correct by 9/5/2025.

3.129(b)

Feeding.

Areas where grain and produce is fed to the billy goats, cows, and sheep had leftover wet feed material that had flies on it and had a rotten smell. Maintaining these areas clean is required to help prevent flies and protect animal health by preventing food contamination. Ensure to maintain a routine of keeping feeding areas clean at all times. Receptacles/feeders and areas where animals regularly fed must be kept clean and sanitary at all times.

***Correct from 8/21/2025 forward.

3.131(c)

Sanitation.

Inspection Report

Weeds with spiny seed pods have grown over the elk's water bowl to where access to his water bowl could be impeded. While he still has access to the water overflow that creates a wallow area, the overgrown weeds could make it less desirable to drink the potable water in the bowl. Ensure that grounds are kept in good repair and free from weed overgrowth to facilitate normal husbandry practices as required such as access to clean water for the elk.

***Correct by 8/22/2025.

3.153(a)(1)(i)

Primary enclosures.

The corn crib areas housing peacocks had areas that need repair. A re-bar was in the west corn crib with a sharp point sticking in where peafowl can touch it. Multiple areas had loose wire with loose points that could injure peacocks. Ensure that areas where birds are housed are free from sharp points and maintained in a manner that protects the birds from possible injury.

***Correct by 8/26/2025.

3.154

Repeat

Environment enhancement to promote psychological well-being.

The written program of enrichment for birds was not available for inspection. A written program of enrichment for birds that is approved by the attending veterinarian must be in place to ensure birds are provided with appropriate environment and social grouping. Ensure to work with the attending veterinarian to develop and maintain a written program of environmental enhancement.

3.154(b)

Environment enhancement to promote psychological well-being.

The peacock housed on the east end of the corn crib areas lacked a perch or area that the peafowl could sit up off the ground if it wanted to. A perching area for peacock provides enrichment for it and an opportunity for it to rest off of the ground. Ensure that each peacock has access to a perching area as a form of enrichment.

***Correct by 8/29/2025.
