Thurmont, MD 21788

Customer ID: **7638**

Certificate: **51-C-0034**

Site: 001

ZOOLOGICAL CONSORTIUM OF
MD INC

Type: ROUTINE INSPECTION

Date: 06-MAR-2024

3.127(b)

Facilities, outdoor.

At the time of inspection, it was raining and the ground inside the shelter in Paddock B was excessively muddy. The metal roof of the shelter is rusted to the point that small holes are present, allowing rain to come into the shelter. The Paddock B shelter for the hoofstock (emus, deer, mouflon sheep, yaks, camels, cattle) does not provide adequate protection from inclement weather. The animals have access to other shelter. The roof of the Paddock B shelter must be replaced with material that will protect the animals from adverse weather conditions and prevent discomfort. Correct by March 22, 2023.

3.133

Separation.

Three dingoes fought and sustained injuries that required veterinary care - stitching up wounds on the face and body. One dingo was observed limping during the inspection but intermittently stretched and put weight on the leg.

At the time of inspection, the dingoes were still housed together with no further fighting noted. Since the animals have fought before, they are no longer a compatible group. Incompatible animals should not be housed together. These animals should be separated to prevent any further fighting amongst the group. Correct by March 20, 2024.

The licensee discussed plans to separate the dingoes into two groups.

3.152(b)

Facilities, outdoor

The outdoor enclosure housing 4 barred owls has two shelters that are not designed to provide adequate shelter from inclement weather.

There is no shelter from inclement weather provided for the 3 free-ranging mute swans.

Outdoor housing facilities must provide adequate shelter to protect birds from any adverse weather conditions. Shelters
