Type: ROUTINE INSPECTION
Date: 20-AUG-2025

3.75(c)(3)

Housing facilities, general.

There is an accumulation of dried feces on the floor between enclosures for the adult cotton top tamarin and adult common marmoset and the adjacent wall. The wall also has excessive brown streaks and splatters on it. The licensee states the last time the wall was cleaned was over a month ago (before 10 July 2025). Not maintaining appropriate levels of cleanliness can lead to accumulations of excreta and food debris which can attract pests and create a disease hazard. Housing facility surfaces must be cleaned and sanitized when necessary to satisfy generally accepted husbandry standards and practices.

Correct by 31 August 2025.

This inspection and exit interview were conducted with the licensee.
