Type: ROUTINE INSPECTION
Date: 08-JUL-2025

3.11(b)(2)

Cleaning, sanitization, housekeeping, and pest control.

Food receptacles are not being cleaned and sanitized appropriately. Located within three feeders along the top upper rim was old feed that had been wet and allowed to decay. Feed had become compacted and encased with mold. Within the feeders located beneath the fresh food was a layer of white and gray powdery organic material and a black greasy substance. Present above and around the feed receptacles were minor amounts of cob webs and grime. One feeder had approximately day old feces within the food and a dog was seen eating the kibble around it. Improper cleaning of feed receptacles can make food unpalatable and decrease its nutritive value. Food and water receptacle must be sanitized at least once every 2 weeks and more often if necessary to prevent accumulation of dirt, debris, food waste, excreta, and other disease hazards.
Correct by 7/11/25.

This inspection and exit interview were conducted with the facility representative.
