### 3.153(a)(1)(ix)

#### Primary enclosures.

A green wing macaw enclosure had significant rust damage on the wire and supports in one corner, with loss of the protective coating over the metal. Severely rusted metal is difficult to clean and sanitize, and may represent an injury hazard, representing a risk to animal health from microbial contamination or breaks in the metal. The facility must ensure enclosures can be cleaned and sanitized and/or replaced when worn.

Correct by 30 May 2024

This inspection and exit interview were conducted with the facility representatives.
