Type: ROUTINE INSPECTION  
Date: 01-APR-2015

---

### 2.40(b)(2) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A male Welsh Corgi with microchip number 004883322 is observed to have overgrown toenails. Overgrown toenails can be painful especially if they become caught or break. The licensee needs to appropriately address the overgrown toenails of this dog and develop and maintain a grooming program that addresses the toenail health of all the dogs at the facility.

### 2.50(a)(1) REPEAT

#### TIME AND METHOD OF IDENTIFICATION.

Two female Pomeranians, one male Pomeranian/Poodle mix and two female Pomeranian/Poodle mixes all 16 weeks or older in age are not currently identified (microchipped) with official USDA identification. Lack of official identification does not allow for the proper identification or tracking of the animals. All adult dogs must be identified with official USDA identification.

### 2.75(a)(1) REPEAT

#### RECORDS: DEALERS AND EXHIBITORS.

The licensee has not provided the buyer or receiver information (block #4) on APHIS Form 7006 on twelve dispositions that occurred between September 2014 and March 2015. Lack of complete and accurate records does not ensure for the proper tracking of the animals. Document the buyer or receiver information on APHIS Form 7006 so that they accurately reflect the puppy dispositions.

## Inspection Report

---

2.130

### MINIMUM AGE REQUIREMENTS.

Records indicate that on 1-08-2015 five puppies less than 8 weeks old were sold to a pet store. Records also indicate that on 2-19-2015 six puppies less than 8 weeks old were sold to a pet store. All the puppies were 55 days old instead of the required minimum of 56 days old. Transporting puppies under 8 weeks of age may increase their risks of health problems. Puppies from a USDA licensed facility must be at least 8 weeks old and weaned prior to being sold or transported in commerce. Correct from this day forward.

3.1(c)(1)(2)

### HOUSING FACILITIES, GENERAL.

The wire fencing of the middle enclosure on west side of the inside/outside building as well as in the second pen on the east side of the inside/outside building has loosened and separated from the main frames causing sharp points to be present inside the runs. Sharp points are an injury hazard. Remove the sharp points from inside the runs. Correct by April 8, 2015.

Inspection and exit interview conducted with the licensee.

End of report.
