Type: FOCUSED INSPECTION
Date: 07-APR-2025

2.38(f)(1) Critical

Miscellaneous.

On April 26, 2024 there was an incident in which 2 macaques were mistakenly placed into enclosures with access to each other resulting in bite wounds. A scientist was returning a macaque to the enclosure after a procedure and a panel allowing access to an adjacent enclosure with another macaque was inadvertently left open. The macaques began fighting resulting in injuries to both animals. One macaque (ID # 150543) had deep wounds on the left shoulder and smaller wounds on the forearm that required repair under anesthesia. The other macaque (ID # 161957) had 2 bite wounds on the left arm and a laceration on the nose that required repair under sedation. Both animals were treated with antibiotics and pain medications and recovered fully.

Failure to handle animals in a careful manner by allowing individually housed macaques contact with each other resulted in significant injuries.

Handling of all animals must be done as carefully as possible in a manner that does not cause trauma, physical harm, or unnecessary discomfort.

Correct by: Corrected at the time of the incident by counseling of the employee. Continue to handle animals in a careful manner from 4/7/25 forward.

This inspection and exit interview were conducted with the attending veterinarian and IACUC representatives.
