### 3.150(e)

#### Facilities, general.

Three covered feed containers storing bird feed were not being stored in a manner that allows for cleaning. Two containers were approximately 10 gallon sized plastic storage totes and one was a reused 32 oz chip container. They were placed above a sanded floor and were in direct contact with free roaming birds within their primary enclosure. These containers were away from the wall which allowed for the accumulation of discarded nesting material and feathers to build up behind it. Located on the lids were minor amounts of bird droppings. Storing feed containers this way, encourages birds to perch above them. The combination of bird droppings, feathers, and discarded nesting materials, makes it difficult to maintain a clean area around the food supply. Supplies of food, including food supplements, bedding, and substrate must be stored off the floor and away from the walls, to allow cleaning underneath and around the supplies. It must be stored in a manner to protect the supplies from deterioration, harmful microbial growth, contamination, and vermin infestation.

To be corrected by 8/4/2025.

### 3.154

#### Environment enhancement to promote psychological well-being.

The environment enhancement plan was incomplete. It did not make provisions for social grouping, environment enrichment, special consideration, restraint devices, and exemptions. A complete environmental enhancement plan is necessary for promoting the psychological well-being of the birds. The licensee must develop, document and follow an environmental enhancement plan that addresses all of these requirements. The plan must be approved by the attending veterinarian.

To be corrected by 8/4/2025

This inspection and exit interview were conducted with the facility representative.
