2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

In the barn, there is a female English bulldog, microchip number 043580265, that has a swollen, enlarged left ear. Licensee said that the dog had gotten into a fight. Licensee stated that he has not consulted with the attending veterinarian on the condition of this dog's ear.

In the same building there is another female English bulldog, microchip number 069803856, that has a red, irritated wound on her head in front of her left ear. Licensee stated that he has not consulted with the attending veterinarian on the condition of this dog's head wound.

Swollen ears and head wounds can cause pain and discomfort to the dogs. Licensee must have the dogs evaluated by a licensed veterinarian for proper diagnosis and treatment plan. Diagnosis and treatment plan must be documented and presented to inspector upon request.

Correct by: 09/26/14

3.6(a)(2)(1) REPEAT

PRIMARY ENCLOSURES.

In the puppy section of the white building, the first enclosure has walls made of vinyl plastic. Along the back wall of this enclosure the vinyl has broken into a sharp edge and has bent inward towards the female English bulldog and her puppies. In the other section of the white building, one enclosure, housing three English bulldogs, has the sharp ends of screws penetrating the dividing walls into the enclosure. In the barn, one enclosure, housing two English bulldogs, has dividing walls made of vinyl plastic that has broken into a sharp edge and has twisted inwards towards the dogs.

Sharp points and edges pose an injury risk to the dogs. All sharp points and edges must be removed or repaired in order to eliminate the injury risk to the dogs.

3.11(b)(2) REPEAT

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Inspection Report

Throughout both the white building and the barn, most the rubber food pans have been chewed by the dogs. The chewing has caused the edges of the pans to become torn, jagged, and allows dirt and grime to penetrate the surface of the rubber. This damage does not allow for proper cleaning and sanitization of the pans. The rubber food pans need to be replaced or altered in a manner that allows for proper cleaning and sanitization of the pans every two weeks.

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

In the barn and the puppy area of the white building there is an excessive number of flies on the walls of the enclosures, in the bowls of food, and on the dogs. The presence of excessive flies increases the risk of food contamination and disease hazards towards the dogs. An effective program of pest control must be established and maintained to reduce contamination of animal areas by flies and other pests in order to protect the health of the animals.
