Type: ROUTINE INSPECTION
Date: 06-AUG-2024

2.75(b)(1)

Records: Dealers and exhibitors.

The facility does not currently maintain records of information required by this section pertaining to the acquisition or disposition of any birds used for regulated activity. These records are needed to facilitate the tracking of, as well as assure the legal acquisition, disposition, proper care, and handling of, such animals. The facility must make, keep, and maintain records which fully and correctly disclose the required information pertaining to the acquisition and disposition of birds used for regulated activity.

Correct by August 20, 2024.

2.131(b)(1) Critical

Handling of animals.

A chicken was fed to the facility's bobcat as a bobcat enrichment activity approximately 1 month prior to inspection. Whereas 4 chickens were reported at the previous inspection, only 3 were present at the current inspection. The licensee disclosed the feeding when the inspector enquired about the status of the 4th chicken. The feeding of live animals as prey causes unnecessary and severe harm and stress to the bird and may further risk injury to the predator. Animals must be handled in a manner that does not cause trauma, physical harm, or excessive discomfort.

Correct by August 6, 2024.

3.131(c)

Sanitation.

General housekeeping around the facility needs to be addressed. There is an excess of clutter, cobweb, and dust accumulation throughout the feed and material storage areas on the premises. Premises must be kept clean to minimize risks to animals and facilitate proper husbandry.

Correct by August 20, 2024.

3.131(d)

Inspection Report

Sanitation.

A wasp nest has developed in the bobcat enclosure, encompassing a section of fencing and support beams at the top face of the enclosure. Insect pests such as wasps may pose an injury and medical risk to animals contained within the enclosure. The facility must establish and maintain a safe and effective program for the control of insect pests.

Correct by August 20, 2024.

3.156

Watering

The watering bowl provided to a Red Tailed Hawk contains an accumulation of debris and algae, causing the water to have a green hue. Unclean and unsanitary receptacles may harbor pathogens and compromise the health and well-being of the bird. Water receptacles must be cleaned and sanitized in accordance with Section 3.158 as often as necessary to keep them clean and free of contamination.

Correct by August 9, 2024.

3.158(a)(1)

Cleaning, sanitization, housekeeping, and pest control.

A small animal kennel provided in the American Crow enclosure is covered with excreta. Inadequate removal of excreta in primary enclosures may expose animals to disease hazards, pests, and odors. The facility must remove excreta and other waste from primary enclosures as often as necessary to prevent excessive accumulation and consequent risks.

Correct by August 13, 2024.

This inspection and exit interview were conducted with facility representatives.
