Certificate: **23-A-0554**
Site: 001
FANNIE WENGERD

Type: ROUTINE INSPECTION
Date: 20-FEB-2018

2.40(a)(1) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** The current Program of Veterinary Care does not have written guidance for the use of chickweed salve that the licensee stated she uses to treat the guinea pigs for ringworm. The use of drugs/preparations such as this without guidance from the attending veterinarian can be harmful to the animals. The licensee must obtain additional guidance to ensure the administration of this product is approved by the attending veterinarian.

2.40(a)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** The current Program of Veterinary Care (PVC) has guidance for euthanasia that includes the use of CO2 by the licensee or by lethal injection to be done by the attending veterinarian. The licensee was not able to demonstrate how to use the CO2 device on hand and stated that she has never used the device. The CO2 tank was found to be empty, which the licensee was not aware of. When asked how animals have been recently euthanized, she stated she started using the unacceptable method previously found to be out of compliance on the 12 June 2017 inspection. This unacceptable method does not ensure a rapid unconsciousness in the animals without evidence of pain or distress. Failure to provide an acceptable method may lead to suffering in the animals. Failure to follow the written PVC does not give the attending veterinarian the authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use. Correct this by ensuring the written plan of veterinary care is followed as written.

Correct from this day forward

3.31(a)(1) REPEAT

SANITATION.

*** Several of the primary enclosures are excessively dirty or wet and have an accumulation of feces. At least 4 of the enclosures need a thorough cleaning to ensure a clean environment for the animals and to satisfy this section of the regulations. The licensee stated that she is cleaning the enclosures weekly. Several of the enclosures were found to be wet enough, especially in the corners, that weekly cleaning may not be adequate to ensure a clean environment for the animals. Correct this by increasing the frequency of cleaning.

Inspection Report

3.31(a)(4) REPEAT

SANITATION.

*** It is obvious by the current condition of this facility that no sanitization schedule is in place to ensure the enclosures are sanitized with a disinfectant at least every 2 weeks. Failure to provide regular sanitization can lead to an increase of potential disease hazards to the animals. Correct this by developing a sanitization schedule to adequately sanitize all enclosures at least every 2 weeks as required.

This inspection and exit interview were conducted with the licensee.
