GROUP

Type: ROUTINE INSPECTION

Date: 29-JUL-2021

---

### 3.75(a) Repeat

#### Housing facilities, general.

There is a section of wire inside the lemur enclosure which is hanging down loose from the top of the enclosure on one side of the wire. This wire lines the top of the enclosure. This is an injury hazard for the lemur as it might become entrapped or one of the lemur's limbs could become caught between the two layers of wire. Housing enclosures must be constructed to protect the animals from injury. This wire should be securely attached to prevent injury to the lemur.

### 3.78(d) Repeat

#### Outdoor housing facilities.

The outdoor enclosure for the lemur does not have the required 6' perimeter fence. This fence serves to protect the lemur by restricting unauthorized access of humans and animals. It prevents physical contact of the lemur by these unauthorized animals or humans. Construct a perimeter fence 6' in height at least 3' from the lemur's primary enclosure. It should be constructed to keep animals from going through or under it.

### 3.127(d) Repeat

#### Facilities, outdoor.

The perimeter fence for the enclosure housing one coyote is not 6' high. This fence must be at least 6' high. It should serve to keep unauthorized persons and animals from going through it or under it and having contact with the coyote. It
