

## Inspection Report

Soul Of The Wolf  
P O Box 3546  
Saint Augustine, FL 32085

Customer ID: **3540**  
Certificate: **58-C-0688**  
Site: 001  
SOUL OF THE WOLF

Type: ROUTINE INSPECTION  
Date: 12-JUL-2017

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The licensee is not following the vaccination schedule that is listed on the Program of Veterinary Care. The current Program of Veterinary Care also does not address all of the species of mammals currently at the facility.

The Program of Veterinary does not list the dosages, frequency, and route of administration for the internal & external parasite control or the vaccinations. The dose and route of euthanasia agents are also not listed in the Program of Veterinary Care.

The Program of Veterinary Care shall be followed or amended with the approval of your veterinarian. All medications that are being used shall list the dose, route of administration, and frequency.

Several expired medications were found during this inspection as follows: 1 bag lactate ringers-exp apr 2015, boxes of Capstar-exp 2/2016 & ivermectin-exp Jul 15. Both the Capstar & the ivermectin are still be administered to the animals.

Expired medications are considered adulterated and not an appropriate method to prevent, control, and treat diseases and injuries.

Correct by July 26, 2017

### 3.125(a)

#### FACILITIES, GENERAL.

Some of the wooden surfaces (resting surfaces, & ramps) in Kumari, Sitarra, Seze (tigers), & Cynzer (serval) are deteriorating and are now either broken &/or splintered in some areas. The present condition of these surfaces now poses a risk of injury to these cats.

All housing facilities shall be structurally sound and in good repair to prevent injury to the animals.

## Inspection Report

---

Correct by September 1, 2017

### 3.125(c)

#### **FACILITIES, GENERAL.**

The hay is being stored in an unprotected area that is accessible to ducks and other avian species that are known to nest in and around the hay. Immediately adjacent to the bales of hay is an area that is soiled with bird droppings. There are toxic chemicals also being stored in the food storage area.

These methods of storage do not adequately protect the hay or the food from contamination. Supplies of food and bedding shall be stored in facilities which adequately protect such supplies against deterioration, molding, or contamination by vermin.

Correct by July 17, 2017,

### 3.129(a)

#### **FEEDING.**

The licensee occasionally traps wild (feral) rodents, kills them, and then feeds them to the servals. The health status of these rats is unknown and may carry parasites, bacteria or other disease causing agents.

All food that is fed to regulated mammals must be wholesome and free from contamination to maintain the animals in good health.

Correct immediately.

### 3.131(d)

#### **SANITATION.**

There were numerous flies on and around Angel, Apollo, Venus (tigers), Aries (liger), & Lola (coatimundi). The flies were in sufficient number to cause stress to the cats as evidenced by the constant flicking of their ears and the tail movements in an effort to removed the flies. Lola's food was also covered with flies.

Flies cause stress to the animals, can cause injury to their ears, and may prevent animals from eating their food.

The fly traps that are placed throughout the facility appeared to be used up and are in need of replacements. If this does not correct the problem institute a more effective fly control system in the areas that are affected.

Corrected by July 15, 2017
