Type: RE-LICENSE INSPECTION
Date: 26-SEP-2023

2.40(b)(2) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Three domestic hoofstock animals were identified as having medical issues by the licensee who was treating or planned on treating without prior consultation with the attending veterinarian.

- In the petting zoo area, a black goat with brown and white spots was seen coughing slightly with a small amount of clear nasal discharge and greenish/white discharge at the corner of the right eye. The licensee decided on the treatment plan for this goat during inspection without first consulting with the veterinarian.
- In the drive thru side, one tan and brown male goat was noted to be emaciated with protruding ribs and readily apparent bones along the back side. The licensee explained that this goat was treated with varying dewormers for the past year and was set aside to be culled for failing to gain weight. The veterinarian was not consulted on treatment.
- One red Scottish Highland cow currently under veterinary care in the drive thru area was observed to be thin with the ribs, hips and back bones protruding sharply beneath the skin. Per the facility, treatment for this animal was initiated by the facility about 1 week prior to veterinary consultation.

Furthermore, the same amount of nutritional supplement was administered to most of the animals of the facility without taking into consideration differences in age, weight or species as required in the labeled directions. All rodent animals, regardless of size or species, were also given the same amount of Vitamin C supplement. The facility could not explain why this amount was being given and the attending veterinarian was not consulted on dosage.

Medical care that is not being done per the veterinarian's instructions can result in inappropriate methods to diagnose and treat conditions. Inappropriate supplement dosages being given to animals could negatively impact their health and wellbeing. The licensee must consult with the attending veterinarian to obtain a treatment plan for the animals noted above, to implement a supplement plan based on the specific needs of each animal and then, moving forward, always in cooperation with the attending veterinarian, the licensee must develop appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

Inspection Report

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by NOVEMBER 25, 2023 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.

Additional Inspectors:

STEPHANIE MAYARD, VETERINARY MEDICAL OFFICER
