CLASSIFICATION AND SEPARATION.

***In the enclosure housing 2 rabbits and 1 green-winged teal duck, there was unapproved comingling of species. Rabbits should not be housed with other species due to susceptibility and possible transmission of diseases between species and risk of injury to the rabbits. Rabbits shall not be housed in the same primary enclosure with any other species of animals unless required for scientific reasons.

To be corrected by 6/6/14.

FACILITIES, GENERAL.

***The enclosure housing 3 coati mundi had sharp wire protruding from the corners of the green nest box on the upper platform. The sharp wire poses a risk of injury to the animals.

***The chain link fencing on the west side of a gobex enclosure (13 animals) was loose with numerous sharp ends protruding into the enclosure. The fencing material was not maintained in good repair to protect the animals from injury or to contain the animals.

3.127(a)

FACILITIES, OUTDOOR.

***The enclosure housing 23 gobex did not have adequate shade to protect all of the animals from direct sunlight. The area of shade provided to all animals was a 5 feet by 5 feet area. This area is not large enough to allow all of the animals within the enclosure to be protected from direct sunlight. Inadequate protection from direct sunlight may lead to overheating or discomfort from squinting.

To be corrected by 7/4/14.

water receptacle was a green color in both of these enclosures. Water receptacles must be maintained in a clean and sanitary condition in order to ensure that the animals are provided with clean, potable water, and to ensure that they maintain adequate hydration. These water receptacles must be cleaned more frequently.

Inspection and exit interview was conducted on-site with owner.
