Museum

Type: ROUTINE INSPECTION

Date: 09-JUL-2025

3.130

Watering.

The only water receptacle available to the elk is full of green, murky water. You cannot see through the water and there are green rafts of algae floating on top of the surface. Dirty water could make the elk reluctant to drink which could cause dehydration. Dirty water could also be contaminated with organisms that could cause illness. The licensee must ensure that all water receptacles be kept clean and sanitary. To be corrected by 7/10/2025.

This inspection and exit interview were conducted with the facility representative.
