Certificate: **14-C-0015**

Site: 001

BLUE HILLS TRAILSIDE
MUSEUM

Type: ROUTINE INSPECTION

Date: 26-JUL-2024

3.156

Watering

The only water receptacle in a red-tailed hawk enclosure has accumulated algae and organic material, giving the water a green hue and limiting the bird's access to potable water. Failure to provide potable water may expose birds to disease risks. Water receptacles must be kept clean as often as necessary to ensure health and well-being and must be sanitized in accordance with section 3.158 as often as necessary to keep them free of contamination.

Correct by 7/29/2024.

3.162(b)(2)

Primary enclosures used to transport live birds.

The primary enclosures utilized to transport raptors do not feature external projecting rims or other devices to prevent obstruction of the ventilation holes on the long faces and top of the enclosures. Inadequate ventilation during transport may compromise respiration and cause undue stress. The sides of the transport enclosures with ventilation openings must feature rims or similar devices large enough to provide 0.75 inches between the enclosure and anything adjacent to it, unless 90% or greater of the surface area of the enclosure wall is open.

Correct by 8/9/24, or prior to transporting birds.

This inspection and exit interview were conducted with a facility representative.

Additional Inspectors:

Tonya Hadjis, Supervisory Animal Care Specialist
