1336 S W 85th St.
Wakarusa, KS 66546

Customer ID: **328064**
Certificate: **48-A-2139**
Site: 001
Virginia Hinderer

Type: ROUTINE INSPECTION
Date: 24-JUL-2014

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

* One black and tan adult female Dachshund (microchip number 087 833 017) has excessively long toe nails on both front feet. Long toe nails can be painful causing discomfort when the dog is trying to walk. The potential for injury exists if the toe nail becomes caught in the wire flooring. Lack of nail care on a regular basis can affect the health and well-being of that dog. The licensee must establish a nail trim maintenance program as part of the program of vet care for all dogs at the facility. The licensee corrected this NCI during the inspection.

2.50(d)

TIME AND METHOD OF IDENTIFICATION.

* There was no record of inventory present on "unweaned and weaned "puppies born at the facility. No inventory information was attached to one enclosure containing five "unweaned" puppies and one enclosure containing five "weaned " puppies. If any puppy born on the premise has been recorded on USDA official 7005 forms, then the enclosure must have the following information attached to it: dealer's USDA license number, the letters USDA and the number identifying each puppy in that litter. If no offspring have been recorded on USDA official 7005 forms, then the following information must be recorded and attached to the enclosure. The dealer's USDA number, the number identifying each puppy, the date of birth of the litter, the dam's ID number, a description of each puppy (breed, sex, color and any distinctive markings). The inventory information records must be maintained with all corresponding 7006's for one year. If the licensee chooses to identify the "unweaned" puppies with official USDA identification (collar, tattoo or microchip), then no inventory information is required on the enclosure. Complete and accurate records are needed to ensure that every puppy's identity can be known with certainty and to facilitate the ability to trace all puppies. The licensee must maintain complete and accurate records of all puppies at all times at their facility. Correct by 7/31/14.

2.75(a)(1)

RECORDS: DEALERS AND EXHIBITORS.

* Official USDA dog on hand sheets (7005's) were one dog shy of having a complete listing of all dogs on the premise. When the records and dogs at the facility do not match it makes the records incomplete. Complete and accurate records are needed to ensure each animal s identity can be known with certainty and to facilitate the ability

Inspection Report

to trace dogs. The licensee must maintain complete and accurate records of all dogs at all times at their facility. Correct by 8/24/14.

* No paperwork (Record of Disposition of Dogs and Cats (APHIS Form 7006)) was available on eight Miniature Schnauzer puppies sold 3/28/14 and three Miniature Schnauzer puppies sold on 6/23/14. In addition, no paperwork was made available on five Yorkshire Terrier puppies sold on 7/7/14. Complete and accurate records are necessary to ensure each animal's identity can be known with certainty and to facilitate the ability to trace those animals. The licensee must maintain complete and accurate records of all animals at all times and must ensure those records are available to the inspector upon request. To be corrected from this date forward.

* Licensee had paperwork on all puppies sold to brokerage and was reviewed by inspector.

3.1(c)(1)(1)

HOUSING FACILITIES, GENERAL.

* Excessive rust was observed on one wire enclosure gate. One dog and five puppies are in contact with the affected area which is located in indoor housing. Rust can erode and deteriorate all metal surfaces to the point that the metal surfaces can no longer be readily cleaned and sanitized. Excessive rust affects the structural integrity of all metal surfaces. Licensee must ensure that this and all other surfaces are free of excessive rust and be of good structural strength. Correct by 7/7/14.

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

* There is a mixture of dirt, grease and other excreta on the fiberglass wallboards in two enclosures. There are four dogs in contact with the affected area located in indoor housing. The affected area covers approximately 25 to 30 percent of the total surface area. Sanitization of surfaces is necessary to prevent an accumulation of excreta and other disease hazards. This indicates an unsanitary living condition exists that could lead to potential disease or health risks. The licensee must ensure that all surfaces are spot cleaned on a daily basis and sanitized in accordance with 3.11 (b). Correct by 7/28/14.

3.4(b)(3)

REPEAT

OUTDOOR HOUSING FACILITIES.

* There were no wind or rain breaks at the entrance to one outdoor shelter structure housing one dog. Dogs having inadequate protection from the wind or rain could experience difficulty conserving body heat and maintaining normal body temperatures. The licensee must ensure all outdoor shelter structures have adequate shelter from the elements for the health and well-being of the dogs at all times.

Inspection Report

3.6(a)(2)(10)

PRIMARY ENCLOSURES.

* The feet and legs of multiple puppies were observed passing through enclosure floor openings. Five puppies are in contact with the affected flooring located in indoor housing. Flooring that allows the feet and legs to pass through any openings could lead to possible injury. In addition, the daily activity and mobility of the puppies is affected. The licensee did place four one by one square foot pieces of tenderfoot flooring in the enclosure during the inspection. The licensee must ensure that all flooring does not allow any feet or legs to pass through any openings in the flooring. Correct by 7/28/14.

3.9

FEEDING.

* The entire top of at least one plastic food receptacle is chewed and has a roughened, jagged edge. The receptacle used by one dog is located in indoor housing.. A chewed, roughened, jagged surface cannot be easily cleaned and sanitized and could potentially cause injury to the dog. In addition, it could harbor bacteria and other disease causing agents that can affect the health and wellbeing of the dogs. The licensee must ensure that all receptacles can be properly cleaned and sanitized at all times. The licensee corrected this NCI during the facility inspection.

* There is dust and cobwebs collecting on the tarp straps and the along the top of 16 plastic self-feeders used by 32 dogs. The feeders are located in indoor housing. It indicates unsanitary conditions exist that could impact the health and well-being of the dogs. The licensee must ensure that all self-feeders are kept clean and sanitized to facilitate normal husbandry practices. Correct by 7/7/14.

* The facility inspection done on 7/24/14 and the exit briefing done on 7/25/14 were conducted with the licensee.
