Type: ROUTINE INSPECTION
Date: 31-OCT-2024

3.153(a)(1)(i)

Repeat

Primary enclosures.

Two primary enclosures for birds are still in need of repair.

****Adult macaws are group-housed in an outdoor wire enclosure that still has multiple sharp points and excessive rust. The sharp points and rust are frequently found throughout the wire panels around the enclosure.**

**** An outdoor wire enclosure housing chickens and guinea fowl still has multiple sharp points. The sharp points are found around areas that the birds frequent such as the water and food receptacles.**

Enclosures with sharp points may cause injury to the birds within. The facility must ensure that all primary enclosures be constructed and maintained so that they have no sharp edges that could injure the birds. The primary enclosures must also be kept in good repair.

3.154(b)

Environment enhancement to promote psychological well-being.

The physical environment for multiple bird species including amazon parrots and macaws had either no or very limited enrichment through materials or activities. There was no additional cage complexity provided, nor objects to manipulate or any use of foraging or task-oriented feeding methods. The macaws were observed chewing on the wire panels of the enclosure. These behavioral signs may indicate that enriching the physical environment is necessary to provide the birds with means to express non-injurious species typical activities. The physical environment in primary enclosures must be enriched by materials or activities at an appropriate frequency to promote needs the psychological welfare of the birds. Correct by January 1, 2025.

This inspection and exit interview were conducted with a facility representative.
