Temperance, MI 48182

Customer ID: **45064**
Certificate: **34-B-0225**
Site: 001
ZACHERY KEELER

Type: ROUTINE INSPECTION
Date: 19-DEC-2019

3.131(a) REPEAT

SANITATION.

There was a significant amount of excreta build-up inside two coatimnudi dens as well as on the shelf the dens sat on. In one of the dens, the build-up was so significant that the floor could not be visualized and it was approximately 1/4-1/2 inch thick. An excessive amount of excreta was present inside the African serval enclosure. Proper cleaning of primary enclosures is crucial to minimize disease hazards, reduce odors, and prevent pests. The primary enclosures for these animals must be cleaned.

3.131(d) REPEAT

SANITATION.

A live mouse was observed in the breeding area of the facility. Rodent droppings were present in several areas of the facility as well as in the hedgehog and capybara primary enclosures. All bait pouches were empty on examination. Mice can be vectors for disease. A more effective pest control program must be implemented and maintained to reduce the mice population at the facility.

This inspection and exit interview were conducted with the licensee.
