Certificate: **58-C-0706**
Site: 001
SAVE THE CHIMPS INC

Type: ROUTINE INSPECTION
Date: 06-FEB-2024

3.84(c)

Cleaning, sanitization, housekeeping, and pest control.

During inspection, the following areas are in need of cleaning and repair:

- A significant accumulation of dust, hair and dirt was observed on the intake air vents in several housing units for the chimpanzees. These intake air vents are passages used in the heating ventilation of the buildings and were currently in use.

- The west perimeter fence line of the premises is not being maintained in a manner that prevents the accumulation of weeds and dense vegetation. The extent of weeds and vegetation prevents assessment of perimeter fence line integrity, and it cannot be determined if the fence is in need of repairs. Dense vegetation may also provide harborage for rodents, pests, and vermin. Corrected at the time of inspection.

These areas are not being maintained in a manner that protects animal health and welfare. Premises where housing facilities are located, including building and surrounding grounds, must be kept clean and in good repair to facilitate husbandry practices and reduce or eliminate breeding and living areas for rodents, pests, and vermin. Correct by February 23, 2024.

This inspection and exit interview were conducted with facility representatives and staff.
