Type: RE-LICENSE INSPECTION
Date: 21-SEP-2021

2.40(b)(3)

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Two recently acquired pigs were scratching and rubbing their bodies excessively along inanimate objects throughout the pen. They both also had multiple areas of alopecia with dry skin. A neighboring group of three piglets were also rubbing and scratching their skin in a similar fashion. The attending veterinarian (AV) was not made aware of these issues. Failure to notify the AV in a timely manner could lead to injury and/or death of an animal. A mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the AV.

CORRECT BY: September 26, 2021

2.75(b)(1)

Records: Dealers and exhibitors.

Records for the acquisition, disposition, and number of animals on hand were not available at the time of inspection. These records help maintain an accurate count of regulated animals, as well as their movement on/off the premises to ensure their welfare. Every exhibitor must make, keep, and maintain records or forms which fully and correctly disclose all required information, including any offspring born of any animal while in the possession of the exhibitor.

Inspection Report

CORRECT BY: September 26, 2021

3.53(a)(2)

Primary enclosures.

There were 4 rabbits in suspended metal cages with excessive rust - especially along the bottom of the cage. One of the white rabbits' hair was stained from the rust along the underside of its trunk and lower extremities. Enclosures that are not maintained in good repair can impact the welfare of the animals contained therein. Primary enclosures must be constructed and maintained so as to enable the rabbits to remain dry and clean.

CORRECT BY: September 26, 2021

3.81(c)(4)

Environment enhancement to promote psychological well-being.

The Non-Human Primate (NHP) Environmental Enhancement plan does not address the special considerations for the individually housed Black and White Ruffed female lemur that is unable to see and hear NHP's of her own or compatible species. Individually housed NHP's require special attention, and without it, they could start to experience psychological distress. The special considerations for individually housed NHP's need to be documented with the rest of the Environmental Enhancement Plan.

CORRECT BY: September 26, 2021

3.125(a)

Facilities, general.

Inspection Report

There were several areas throughout the facility with sharp points or edges, including: Pieces of the outside camel wire fence enclosure – the portion that connects to the barn – had areas with pieces of wire projecting outwards away from the rest of the fence, along with exposed nails along the barn doorway; There were similar findings along the wire fence enclosure housing the partially-blind goat; on the right backside of the barn wall, within the outside enclosure housing the llamas, fallow deer, etc., there was a metal panel that was broken away from the wall, measuring approximately 5 x 4 inches; In the outside portion of pen #10, there was a large hole in the lower portion of the back metal fence, with pieces of the wire sticking outwards; and lastly, in the enclosure housing the lemur, there were exposed nails along the top inside border of the outdoors portion of the enclosure. There was a large hole in one of the fences bordering the outdoors portion of the sheep and goat enclosure.

Facilities that are not maintained in good repair can lead to escape, injury and/or death of an animal. The indoor and outdoor housing facilities must be structurally sound and maintained in good repair to protect the animals from injury and to contain the animals therein.

CORRECT BY: September 26, 2021

This is a 1st Re-License Inspection for a Class C license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by November 20, 2021 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.
