3.75(a)

Housing facilities, general.

A wooden support beam located in the upper rear corner of a singly housed Diana Monkey enclosure was showing signs of decay.

Enclosures that are not structurally sound may allow the animals within to escape or allow other animals to enter the enclosure. These conditions might also lead to injury of the animals.

Housing facilities for nonhuman primates must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering. The beam was replaced, and the noncompliance was corrected at the time of inspection, 03 September 2024.

This inspection and exit interview were conducted with a facility representative.
