Chase Animal Rescue and
Sanctuary

Type: RE-LICENSE INSPECTION
Date: 04-JUN-2025

2.40(b)(3) Direct

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

There is one adult female albino wallaby at the facility that is in need of veterinary care. Around 5 pm on 6/4/2025, APHIS Officials identified the wallaby which appeared lethargic with an unkempt coat and a thin body condition. She was found lying listless in the prone position with her eyes closed against the back wall of the enclosure while the rest of the wallabies were active. Upon closer monitoring, the wallaby was observed to have a swollen area on the underside of the right jaw. The wallaby was also seen opening and closing its mouth, sticking out its tongue, and smacking its lips repeatedly. When asked, the facility stated that none of the staff had noticed this wallaby's condition. Inadequate daily observations and failure to observe medical problems can lead to the prolonged suffering of animals when injuries or changes in their health or behavior are not noticed in a timely manner. The facility must ensure that all animals are observed daily to assess their health and well-being and then ensure a mechanism of direct and frequent communication with the attending veterinarian. The facility must obtain veterinary care for this wallaby. To be corrected by close of business on June 5, 2025, or prior to the next licensing inspection, whichever comes first.

3.127(d) Repeat

Facilities, outdoor.

There is a section of the perimeter fence at the back of the property that does not connect, creating a large opening. This incomplete section of fence leaves the two giant anteaters without a perimeter fence. The facility fixed this gap during the inspection.

An insufficient or incomplete perimeter fence can allow unwanted animals or people to enter the facility and potentially harm the animals within. An incomplete perimeter fence is also not able to act as secondary containment for the animals and can lead to escape. The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient height (at least six feet high) to keep animals and unauthorized persons out. It must be of sufficient distance (at least three feet) from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence.

Inspection Report

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by 03 AUG 2025 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.

Additional Inspectors:

KRISTIN NAPOLI, SUPERVISORY ANIMAL CARE SPECIALIST
