Site: 001  
WILDLIFE ENCOUNTERS L L C

Type: FOCUSED INSPECTION  
Date: 08-FEB-2022

---

### 3.54(b)

#### Feeding.

One of the rabbits housed in the barn had a feed receptacle with dried urine spots and dirt caked on the exterior of the feeder, which the licensee stated had not been cleaned since the animal was received several months earlier. Lack of sanitation of feeders may result in deterioration of the feed and nutritional content. The licensee must ensure feeders are sanitized at least every two weeks.

Correct by 2/10/22

### 3.130

#### Repeat

#### Watering.

The water bottle for the coatimundi had pale to dark green material adhered to the sides and top of the bottle. Similarly, one chinchilla had green material adhered to the interior of the water bottle. Growth of algae and biofilm may contaminate water and present a disease hazard. Water receptacles shall be kept clean and sanitary.

### 3.131(a)

#### Sanitation.

The animal access door from the interior of the coatimundi enclosure to the exterior pen was caked with feces and dirt although the enclosure had just been cleaned. The sugar glider enclosure similarly had old fecal pellets present caught in

## Inspection Report

---

the cage wire although it had been cleaned the day before. Failure to remove animal wastes including excreta may lead to contamination and presents a disease hazard. The licensee must ensure that animal excreta is adequately removed during cleaning.

Correct by 2/10/22

This is a continuation of the report for the routine inspection conducted February 8, 2022 and contains the remaining non-compliances found during the inspection. The exit briefing for the items included on this report was conducted on February 10, 2022.

This inspection was conducted with the facility representative on February 8, 2022.

The exit interviews were conducted with the facility representative on February 8, 2022 and February 10, 2022.
