Facilities, general.

An approximately 4in by 3in hole in the enclosure netting was located in the top right hand corner of the enclosure that housed a Turkey vulture. A hole in an enclosure wall can create the opportunity for injury or escape for the bird that resides inside. Housing facilities for birds must be designed and constructed so that they are structurally sound for the species of bird housed in them. They must be kept in good repair, protect the birds from injury, and restrict other animals from entering that may negatively affect the welfare of the birds within. Correct by January 30, 2025.

3.125(a) Repeat

Facilities, general.

The facility failed to maintain housing facilities in good repair.

- A portion of the shifting shoot for two Tigers contained areas of flaking paint and rust. The areas are routinely pressure washed to clean, however, rust and flaking paint is still present.
- The Red river hog was able to lift the chain link fence at the base of on one of the sides of her enclosure creating a gap to obtain access outside of her enclosure.

Failure to maintain housing facilities in good repair can affect the structural integrity of the enclosure which may lead to injury or harm of the animal. Housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals within.

3.153(a)(1)(iv) Repeat

Primary enclosures.

Two wild starlings that are not meant to be part of the exhibit were observed in the primary enclosure containing two Blue-and-gold macaws. Prevention of wildlife from entering a primary enclosure prevents the transmission of disease, parasites, and pests. Primary enclosures must be constructed and maintained so that they restrict other animals from entering the enclosure.

This inspection and exit interview were conducted with the attending veterinarian and facility representatives.
