Type: ROUTINE INSPECTION  
Date: 11-OCT-2016

### 2.40(b)(2) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A male Pomeranian (tag #69) has a thick, dark brown buildup of tartar on the surface of the cheek teeth on both sides of the mouth. The thick, dark tartar buildup is also located on the upper canine teeth along the gum line. One upper cheek tooth on the left side of the mouth is loose and moved freely when touched by the inspector. The gums are mildly reddened. This dog also has large areas of hair loss on the body. The areas of hair loss are located along the rib cage of both sides of the body and some of these areas are completely hairless. Hair loss was also observed on the backside of the lower left hind leg.

The licensee stated that she had spoken to the veterinarian about the condition of the dog's teeth a few months ago and at that time, the licensee had decided to euthanize the dog when she was done with him. After this veterinary consultation, the dog has not undergone any treatment for the condition of the teeth, and has not been evaluated for the hair loss, and no appointment for euthanasia had been set at the time of the inspection.

Poor dental and hair coat conditions could cause pain and discomfort to the dog, as well as lead to further health issues.

This dog must be evaluated by a licensed veterinarian for a proper diagnosis and to establish an effective treatment plan. The diagnosis and treatment plan must be documented in writing and available to the inspector upon request. The licensee must ensure that all dogs receive adequate veterinary care at all times.

This inspection and exit interview were conducted with Kelly Maxwell, ACI and the facility representative.
