54 East Castor River Rd
Fredericktown, MO 63645

Customer ID: **18810**
Certificate: **43-A-5428**
Site: 001
JACK & MELISA PARSON

Type: ROUTINE INSPECTION
Date: 21-NOV-2016

3.4(b)(2) REPEAT

OUTDOOR HOUSING FACILITIES.

***Two Australian shepherds are housed in an outdoor set of concrete floor enclosures. A solid shade panel was located over the top of one of the enclosures but did not provide additional shade for the adjacent enclosure. This adjacent enclosure currently does not have any shade structure in place except for the barrel structure used for shelter. All outdoor enclosures must be provided with adequate shade structures to effectively provide shade to the enclosure during the daylight hours. Shade must be provided for this enclosure. Since previous inspection the owner had placed a tarp above the enclosures to serve as a shade structure but at the time of this inspection no tarp was in place.

3.4(b)(3)

OUTDOOR HOUSING FACILITIES.

***The two barrels utilized as shelters for the two Australian Shepherd males do not have wind and rain breaks at the entrance to the shelter. All outdoor shelters must be equipped with structures that will minimize the effects of wind and rain within the shelter. Minimizing the wind and rain inside the shelter will increase the dogs' ability to maintain proper body temperatures in cold, wintry weather. Both structures should be fitted or placed with an effective wind and rain break. To be corrected by: 11/28/16

3.4(b)(4)

OUTDOOR HOUSING FACILITIES.

***The two Australian Shepherds located in the outside concrete runs do not have bedding within the shelters provided for them. Current outside temperatures are in the upper 40 degree F range with overnight temperatures in the 30 degree F range at least the last two nights. No other forms of heating were available to these two enclosures. All outdoor shelters must have clean, dry bedding available when the ambient temperatures drop below 50 degrees F. The bedding must be of a sufficient quantity to allow the dog to nest and conserve body heat. To be corrected by: 11/22/16

3.11(a)

Inspection Report

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

***A sheltered enclosure containing two Australian Shepherd females was observed with water standing in the exterior portion of the enclosure. The dogs were walking in the water and soiling the remaining portion of the enclosure with water contaminated with feces. All enclosures must have standing water removed to allow the dogs to remain dry and to keep the enclosure as clean as possible. To be corrected by: 11/22/16

This inspection and exit interview was conducted with the owner by Curt McGruder-ACI.
