Type: ROUTINE INSPECTION
Date: 12-DEC-2023

2.33(b)(3)

Repeat

Attending veterinarian and adequate veterinary care.

On December 12th during the inspection of the sheep in the Bay Research Barn, it was noted that there was one sheep (MPS14) in the east most of the south runs that was thin. After it was noted during inspection, a clinical veterinarian for the facility assessed it as having a body condition score of 1.5. There had been no report of the sheep being thin prior to it being noted on the USDA inspection. Failure to observe medical problems and/or communicate those problems to a veterinarian can result in prolonged medical conditions and ongoing pain. A facility representative must observe all animals daily and then ensure a mechanism of direct and frequent communication with a veterinarian so that timely and accurate information on problems of health, behavior, and well-being are conveyed. This animals were assessed by a veterinarian at the time of inspection.

This inspection and exit interview were conducted with facility representatives.
