Repeat

Outdoor housing facilities.

While walking behind the macaque row enclosures inspectors noticed the top of the perimeter fencing detached from the top pipe and bending inwards. Along the same section of perimeter fencing, inspectors noticed top portions unwinding and a large gap forming. The integrity of the perimeter fence is important to minimize stress to the non-human primates from outside people or animals. The fence must be constructed so that it protects nonhuman primates by restricting unauthorized humans, and animals the size of dogs, skunks, and raccoons from going through it or under it and having contact with the nonhuman primates.

Corrected by June 28, 2023.

Outdoor housing facilities.

The public barrier in front of the Chimpanzee enclosures had a section where the top bar detached from the chain fence link. The public barrier is not secured and gives to minimal amount of weight. The reasonable amount of slack on this public barrier does not allow it to deter the public from having direct access to the non-human primates (NHP). The public barrier functions as a deterrent for the public to have contact with the non-human primates, prevent stress, and injuries to
