Shirley Farms
2557 SOUTH BLUFF RD
OBION, TN 38240

Customer ID: **44856**
Certificate: **63-C-0201**
Site: 001
SHIRLEY FARMS

Type: ROUTINE INSPECTION
Date: 06-DEC-2023

3.75(c)(1)(i) Repeat

Housing facilities, general.

The metal pipe used as a conduit for the snow macaque to move from the indoor to outdoor areas of his sheltered housing enclosure has developed rust on the bottom surface of the pipe that has affected the structural integrity of the metal pipe. The affected area of the metal pipe has not been repaired or replaced since the last inspection. There is at least one small hole (1.5x1in) visible in the rusted area on the bottom surface of the pipe about 6 inches from the end of the pipe. The rusted area is approximately 5inx8in. Rusted metal surfaces are not able to be cleaned and sanitized appropriately and eventually lose structural integrity with sharp edges that may injure the animal.

The facility shall ensure that the metal pipes used by the monkeys to access indoor/outdoor areas of their enclosures have surfaces that are in good repair and free of excessive rust.

3.82(d)

Feeding.

The food receptacle for the two marmosets in the enclosure closest to the building's door needs to be cleaned. Dried old food is present on the lip and sides of the ceramic bowl. Food receptacles must be kept clean at all times and sanitized at least once every two weeks to ensure that there is no molding, deterioration, contamination or caking of the food.

The food receptacles for the marmosets must be kept clean and must be sanitized at least once every 2 weeks. Correct by 12/7/23.

3.84(a) Repeat

Cleaning, sanitization, housekeeping, and pest control.

The marmoset enclosure nearest the building entrance housing two marmosets is in need of cleaning. The shelves and bottom tray of the enclosure are dirty as is the floor beneath the enclosure. Accumulations of dirty shavings, excreta and dried food debris are present. Daily spot cleaning of all hard surfaces is necessary to prevent an excessive accumulation of excreta and food wastes, to prevent the animals from becoming soiled and to reduce disease hazards, insects, pests and odors.

The marmoset enclosure including the shelves and trays need to be spot cleaned daily and the area underneath the enclosure as often as necessary.
