3.130

Watering.

The water container for the adult paca had a damaged rim creating groves and ragged edges all along the top of the black rubber like material. There was a white mineral like coating on approximately 90 percent of the bottom and sides of the interior of the water container. The shaded side of the container had a thin layer of green algae like growth. The damage to the material prevents the water receptacle from being completely clean and sanitary. These factors could cause contamination of the water.

Drinking contaminated water can lead to disease and illness or may cause the animals to stop drinking water leading to dehydration.

All water receptacles shall be kept clean and sanitary. Corrected at the time of the inspection.

This inspection and exit interview were conducted with a facility representative.

Additional Inspectors:

Charles Palmer, VETERINARY MEDICAL OFFICER
