Anna Troyer  
374 Audrain Rd 140  
Clark, MO 65243

Customer ID: **325800**  
Certificate: **43-A-5703**  
Site: 001  
Anna Troyer

Type: ROUTINE INSPECTION  
Date: 22-SEP-2016

### 2.40(b)(2) REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

\*\*\*There was a male Chihuahua (#310) with hair loss and circular-like skin lesion in the area of the right shoulder. The areas of hair loss was round in shape and about 1 inch in diameter. In the middle of this area a 1/4" round area was raised appeared to be scabbed. The licensee was not aware of the dog's condition prior to the inspector pointing it out. This dog's condition could be due to an injury, infection or a variety of other veterinary medical conditions. The licensee must consult with a licensed veterinarian regarding this dog's condition in order to ensure that an accurate diagnosis is made and an appropriate treatment plan is developed and followed. The licensee must document this information and make it available to the inspector upon request. The licensee must ensure that all animals receive adequate veterinary care at all times.

There were two medications in transfer bottles "Sulfatrimethoxine" and another bottle the name was not legible. Neither bottle had an expiration date. Expired medication may not work as anticipated, could become contaminated or harm the animals. Medications must be labeled with appropriate and accurate information in order to ensure that the contents of the container can be known with certainty, that the drugs are used at safe doses, and that medications are not used past their expiration dates.

### 3.1(c)(3) REPEAT

#### HOUSING FACILITIES, GENERAL.

\*\*\*\*Cleaning.

The floor under the puppy enclosures there was a build up of feces, urine, and food. Some of the food under these enclosures was moldy. There was also dirt and grime hanging from the underside of the flooring. The washdowns under the dogs in the whelping portion of the facility had a brown liquid paste built up along the entire washdown. There was stronger odor in the proximity of these areas. Buildings and surfaces which are not cleaned and sanitized properly or often enough increase the risk of disease transmission to the dogs. The licensee must ensure all surfaces in contact with the dogs are spot cleaned daily and sanitized at least once every two weeks. The licensee must ensure all other surfaces of housing facilities are cleaned and sanitized when necessary to satisfy generally accepted husbandry standards.
