Type: ROUTINE INSPECTION
Date: 26-FEB-2025

2.75(b)(1)

Records: Dealers and exhibitors.

The Record of Animals on hand (acquisition and disposition records) seen at time of inspection was not current or complete. Since the last inspection, additional animals have been acquired, and others have been sold and/or disposed of without documentation as follows:

- Acquisitions: a cow, a squirrel, goats, and pigeons.
- Dispositions: a dog, goats, and sheep.

Accurate and complete acquisition and disposition records are necessary to allow for medical and legal tracking of the animals. The facility shall ensure that they make, keep, and maintain records that fully and correctly disclose all the required information for all animals purchased or otherwise acquired, owned, held, leased or in their possession or which are transported, sold, euthanized, or otherwise disposed of. The records shall include any offspring born of any animal while in his or her possession.

Correct by 04/15/2025.

3.13(b)

Veterinary care for dogs.

The facility does not have complete medical records (except for vaccination certificates for rabies and distemper/parvovirus and parasite prevention medication logs) for the dogs and dog hybrid available for this inspection. The complete records are currently kept at the attending veterinarian's office. Keeping up to date medical records is required to verify routine preventative care, annual exam findings and appropriate treatment of any medical conditions/injuries for the dogs and dog hybrid. The facility must keep copies of medical records for dogs and dog hybrids that include the following required information: identifying information about each dog and dog hybrid, all preventative and routine husbandry procedures performed, information about problems identified, treatments/vaccinations administered, and results of all tests and examinations performed as well as make the records available for APHIS inspection.

Correct by 04/15/2025.

3.127(d)

Facilities, outdoor.

The primary outdoor enclosure housing a wolf did not have a perimeter fence of adequate height for dangerous species. Instead of the required 8 feet (or 96 inches), it ranged from 92 to 94 inches tall. The lack of an adequate perimeter fence

Inspection Report

presents a safety risk to the animals within the facility in that there isn't an adequate secondary containment system to hold animals that may escape their primary enclosures or a sufficient barrier to keep animals and unauthorized persons out. The facility must ensure that the wolf being housed outdoors is enclosed by a perimeter fence, 8-feet tall. The perimeter fence must be effective, continuous, and at least 3 feet in distance from the primary enclosures.

This inspection and exit interview were conducted with the licensee.
