TROY, OH 45373

Customer ID: **17939**  
Certificate: **31-C-0229**  
Site: 001  
MICHELLE IDDINGS

Type: FOCUSED INSPECTION  
Date: 15-SEP-2023

---

### 3.87(a)(3)

#### Primary enclosures used to transport nonhuman primates.

The transport enclosure used for 1 capuchin monkey was made of wire, with openings large enough to allow the monkey to extend its hands outside the transport enclosure. Nonhuman primates that can put body parts through openings in the sides/doors of their transport crates may become injured during transport or may injure nearby animals. Correct for all future transports by using only crates that prevent the animals from putting their body parts outside of the crate. Correct by 9/30/23.

### 3.87(a)(6)

#### Primary enclosures used to transport nonhuman primates.

The transport enclosure used for 1 capuchin monkey lacked handholds or handles. A handler was observed lifting and moving the enclosure, and was struggling to do so without having contact with the monkey inside. Lack of handholds/handles on transport enclosures can result in unintentional contact between handlers and the animals during transport. Correct for all future transports by ensuring that all transport enclosures for nonhuman primates have handles/handholds for lifting enclosures. Correct by 30-September-2023.

### 3.87(c)(2)

#### Primary enclosures used to transport nonhuman primates.

A capuchin monkey was transported in an enclosure that did not have projecting rims to ensure ventilation. The enclosure was a wire pet crate with flat sides. A lack of projecting rims on transport enclosures can impair ventilation during transport. Correct for all future transport by ensuring that transport enclosures have projecting rims or other devices to ensure ventilation openings do not become blocked. Correct by 9/30/23.

This inspection and exit interview were conducted with the owner. This inspection was conducted in Mount Hope, Ohio.
