SPRINGWATER, NY 14560

Customer ID: **504149**  
Certificate: **21-C-0478**  
Site: 001  
ANNE MEADE

Type: ROUTINE INSPECTION  
Date: 08-MAR-2021

---

### 3.31(c)

#### Sanitation.

\*\*\* There was an excessive number of flies in both guinea pig enclosures hovering around the animals and food. The licensee has one fly strip hanging up, but it doesn't seem to be effective for pest control with the current number of flies in the room. The licensee needs to address this, so the pest control program is effective at controlling and reducing the number of flies for the comfort of the animals.

Correct by: March 10, 2021

### 3.51(d)

#### Facilities, indoor.

\*\*\* The rabbit has a primary enclosure but is also able to leave the enclosure and move around a room with several other species. The rabbit has been actively chewing at the back wall and has chewed paint and drywall away. This can be an ingestion hazard and this section of wall is no longer impervious to moisture which impacts the ability for the room to be effectively cleaned and sanitized. This needs to be addressed to facilitate cleaning of the room and for the safety of the rabbit.

Correct by: April 3, 2021

### 3.125(a)

#### Facilities, general.

## Inspection Report

---

\*\*\* The wire chinchilla enclosure housing three chinchillas has broken wires at the ramp area and on a shelf. The wires are protruding into the enclosure which can be a safety issue for the animals and affects the structural integrity of the enclosure. This enclosure needs to be maintained in good repair for the safety of the animals.

Correct by: March 13, 2021

### 3.56(a)(2)

#### Sanitation.

\*\*\* The blue rabbit enclosure is filled with feces that need to be removed. The animal can leave the enclosure and move around the room, but the accumulation of feces contributes to a strong odor in the area. This enclosure should be cleaned more frequently to reduce this accumulation.

Correct by: March 11, 2021

### 3.56(c)

#### Sanitation.

\*\*\* The rabbit has the ability to move around a room where two chinchilla enclosures are placed on the ground. The chinchilla enclosures have no solid floor and there are chinchilla and reptile feces directly on the tile where the rabbit has access as it moves around the area. The premises where the rabbit is housed should be kept clean to facilitate good housekeeping practices.

Correct by: March 11, 2021

### 3.131(a)

#### Sanitation.

\*\*\* The hedgehog enclosure needs to be cleaned. The wheel is covered with feces and the tile floor is dirty and stained with feces. There is no bedding available to soak up urine and feces and there is limited area where the animal can walk and stay clean.

## Inspection Report

---

\*\*\* The chinchilla enclosures are also dirty and need to be cleaned. There is dust and debris throughout the wire mesh and the floor is dirty and stained with feces. These enclosures need to be cleaned on a more frequent basis. Cleaning for these species must be done as often as necessary to prevent contamination of the animals and to minimize disease hazards and reduce odors.

Correct by: March 11, 2021

This inspection and exit interview were conducted with the licensee.
