Type: ROUTINE INSPECTION
Date: 15-NOV-2016

3.56(a)(3)

SANITATION.

The waste collection troughs in front of the rabbit enclosures are full of feces and urine. The collection buckets are overflowing on the ground near the enclosures. The build up of feces and urine is creating a strong odor and is an attractant for pests that may harm the animals. More frequent cleaning of troughs and collection buckets will prevent the odor. Troughs must be cleaned at least weekly.

CORRECT BY : 11-16-16 Note : an employee began cleaning this area during the inspection .

3.56(c) REPEAT

SANITATION.

There was a build up of dirt on the PVC pipe water lines and support poles for the rabbit enclosures on the May 2016 inspection and the water lines/support poles are in the same dirty condition at time of this inspection .Premises (buildings and grounds) shall be kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices .

3.125(c)

FACILITIES, GENERAL.

There are open sacks of feed in the food storage area. Feed which is not stored properly is at a risk of being contaminated by pest or deterioration from moisture. This reduces the nutritional value and may harm the animals. All feed must be stored to protect supplies from contamination or deterioration.

CORRECT BY : 11-18-16

3.130

WATERING.

There was no water in the containers provided to a lamb and goat kid in the isolation pen. The licensee was requested to provide water at time of the inspection and the lamb drank for several minutes without stopping. The goat kid did not drink water. The licensee stated water had been provided earlier in the day but the water

Inspection Report

containers were dog food bowls which could easily be overturned by the animals. The animals must have access to potable water as often as necessary to provide for their health and discomfort. A water container of a proper size for goats and sheep shall be provided to ensure that the container contains enough water for them and can not be easily overturned.

CORRECTED DURING INSPECTION

3.131(c)

SANITATION.

The area surrounding the food storage area and next to the housing area for the animals is very cluttered. There are discarded items and debris stacked in these areas. A truck is being repaired next to the animal pens. Allowing trash and items not related to the daily care of the animals to collect near animal housing create a habitat for pests which may harm the animals. Materials used in the truck repair are a hazard for animals if they are spilled or leak. Accumulations of trash and items not related to animal care must be kept away from animal housing areas to protect the health of the animals.

CORRECT BY : 12-16-16

The inspection and exit briefing was conducted with the owner.
