Certificate: **42-C-0240**

Site: 001

HANSEN'S FARM FRESH DAIRY  
INC

Type: RE-LICENSE INSPECTION

Date: 04-OCT-2021

---

### 2.40(b)(3) Critical

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

One female kangaroo had an injury to her footpad, the facility treated the kangaroo's injury for approximately 9 months without consulting the attending veterinarian about the treatment plan. The kangaroo's quality of life deteriorated and the attending veterinarian was called to euthanize the kangaroo.

Direct and frequent communication with the attending veterinarian is required so that timely and accurate information on problems of animal health, behavior, and well-being can be discussed and a treatment plan can be made.

The facility must communicate any animal health concerns with their attending veterinarian so that an effective treatment plan can be put in place.

### 2.75(b)(1)

#### Records: Dealers and exhibitors.

During the review of paperwork and records it was found that The Record of Animals on Hand was missing 3 red kangaroos and the updated death record of one red kangaroo.

Incomplete records interfere with our ability to identify individual animals and trace animal movements.

## Inspection Report

---

Facility representative corrected at the time of inspection.

### 3.125(a)

#### Facilities, general.

Along the north fence line, closest to the road, there is a tarp tied to the fence with baling twine to serve as a wind break and visual barrier. The twine comes through the fence and is tied on the inside of the enclosure housing 5 red kangaroos. There are approximately 15 knots tied and the ends of the knots are approximately 2-6 inches long and frayed. Materials not kept in good repair could cause entanglement and other injuries.

Along the primary enclosure fence line there are two areas where the kangaroos have dug out resting areas. One was approximately 1 foot long along the fence line and the other was approximately 2 feet along the fence line. Both areas the inspector could easily slip a foot under the fence.

The enclosure must be structurally sound and the materials used to construct and maintain the enclosure must be kept in good repair to protect the animals from injury and to prevent entry of unauthorized animals and persons.

The facility must keep the outdoor housing facilities in good repair.

### 3.127(d)

#### Facilities, outdoor.

5 red kangaroos are enclosed in an outdoor primary enclosure that is made of 6 foot chain link fence. There is no perimeter fence surrounding the primary enclosure.

## Inspection Report

---

Perimeter fences are important to prevent contact or entry to the enclosure by predators and unauthorized persons. This could potentially cause injury or illness to the animals.

The facility must have a perimeter fence appropriate for the species being housed or have an approved variance by the Administrator.

### 3.131(a)

#### Sanitation.

The shed that serves as a shelter for the kangaroos also houses their food bins. Inside the shed there was a moderate amount of wild bird feces on top of the food bin lids and surrounding fixtures. 5 red kangaroos are in contact with the affected areas.

Bird feces can create unsanitary conditions, spread disease and contaminate food supplies. The facility must create and maintain a cleaning schedule that promotes the health and well-being of the animals, reduces contamination by pests in the animal area, and minimizes contact between the animals and pest animal feces.

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by December 3rd, 2021 or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.
