Site: 001

NICKEL CITY REPTILES AND  
EXOTICS

Type: ROUTINE INSPECTION

Date: 06-OCT-2022

---

### 2.40(b)(2)

Repeat

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

\*\*\* The arctic fox has long nails that need to be trimmed. There is no place in the enclosure for the animal to dig to naturally wear down the nails so preventative trimming is needed to maintain the nails at a shorter length. Long nails can begin to curl or splay and can put additional pressure on the toes. These nails need to be trimmed on a routine basis as preventative care for the animal.

### 2.75(b)(1)

Repeat

#### Records: Dealers and exhibitors.

\*\*\* The records of animals on hand do not account for animals born at the facility. There are three ring tail lemurs listed on record as acquired and 15 at the facility. Records of animals on hand must account for all animals at the facility, whether acquired from an outside source or born on property. In addition, all animals that leave the facility including sales of hedgehogs, chinchilla's must be recorded on disposition records that identity where the animals go.

### 3.84(a)

#### Cleaning, sanitization, housekeeping, and pest control.

\*\*\* There is an accumulation of feces in the enclosure housing the ring tail lemur under medical treatment. Fecal and food waste must be removed from the primary enclosure daily to prevent this accumulation and to reduce pests and odors.

Correct by end of business day

## Inspection Report

---

### 3.125(d)

#### Facilities, general.

The facility is currently dumping all hay, shavings and feces just outside the building adjacent to the outdoor areas for the large hoofstock. Managing animal waste in this manner is not effectively removing it from the area or minimizing living areas for pests and disease hazards. This waste needs to be removed and disposed of in a manner that protects the animals.

Correct by: Nov 15, 2022

### 3.131(a)

#### Sanitation.

There are two hedgehog enclosures housing females and babies that have an excessive amount of feces that need to be cleaned. These enclosures must be cleaned more frequently to reduce this accumulation and to allow the animals to stay clean and to reduce disease hazards and odors.

Correct by: Oct 7, 2022

This inspection and exit interview were conducted with the licensee.

Additional Inspectors:

Karla Wills, ANIMAL CARE INSPECTOR
