Certificate: 72-C-0142

Site: 001

ZOO OF ACADIANA

Type: ROUTINE INSPECTION

Date: 26-FEB-2014

3.75

HOUSING FACILITIES, GENERAL.

(c) Surfaces (1) General requirements.

***** At time of inspection the fronts of many of the non-human primate night housing units are constructed of wood and allow for direct contact by the non-human primates. These wood surfaces need to be sealed, painted or covered with a material which will allow them to be cleaned and sanitized when soiled or the wood must be replaced when it becomes soiled.

***** The interior of the night housing units for all of the non-human primates is either constructed of wood or the resting areas in the block constructed housing units are constructed of wood which needs to be sealed, painted or covered with a material which will allow these surfaces to be properly cleaned and sanitized as required in the general husbandry for these housing units.

TO BE CORRECTED BY: 9/4/14

3.75

HOUSING FACILITIES, GENERAL.

(a) Structure: construction.

***** At time of inspection the night housing for several of the non-human primates were constructed of wood covered with metal on the exterior. The metal of several of these houses has become rusted along the bottoms and several of the sheets are in need of repair or replacement in order to keep these houses structurally sound and in good repair and to allow for the required husbandry practices required.

Licensee is in the process of building new night houses constructed of concrete block but until these are completed the current housing needs to be kept structurally sound and in good repair.

TO BE CORRECTED BY: 9/4/14

Inspection Report

***** At time of inspection the metal roof of the Gibbon housing unit located in the interior portion of the park has damage to several of the sheets. They have become bent and in some areas unfastened from the wood to which they had been originally attached. These metal sheets need to be repaired and refastened to prevent possible injury to the non-human primates housed in this enclosure.

TO BE CORRECTED BY: 6/4/14

3.125

FACILITIES, GENERAL.

(a) Structural strength.

***** At time of inspection the barn located in the center of the petting zoo area is constructed of wood and has been covered with metal sheeting which is rusted. Several sheets along the bottom of the metal on all sides of the barn have become rusted to the point it needs to be repaired or replaced to keep the animals safe from injury and to keep the barn in good repair.

***** At time of inspection there are several wooden boards used to cover the back wall of the llama enclosure which have rotted away along the bottom of the boards. These boards need to be repaired or replaced to keep this fence in good repair.

***** At time of inspection the mixed exhibit with muntjac deer and squirrel monkeys has a house provided to the muntjac deer which has a metal roof. The roof center top cap made of metal has rusted to the point it needs replacement. Replacement of this top cap will keep the housing unit in good repair.

TO BE CORRECTED BY: 9/4/14

3.131

SANITATION.

(c) Housekeeping.

***** At time of inspection the food preparation building interior walls were wood covered. This wood needs to be sealed, painted or covered with a material which will allow for these surfaces to be impervious to moisture. This wood currently allows for fluids from food prep and from cleaning to be absorbed by the wood which can lead to contamination of the food being prepared for the animals, and allows for disease causing bacteria to grow which can put the animals health and well-being at risk.

Inspection Report

The wood which needs to be sealed, painted or covered with a material to make it impervious to moisture is located over the two compartment stainless steel sink, the walls in contact with the food prep stainless steel tables and the wall directly behind the rack that is used for storage of the cleaned and sanitized food bowls and items used in the daily preparation of food items.

***** The ceiling in the food preparation building is sheet rock which has been painted. The roof has been leaking in three locations onto the interior and has caused areas in the interior to become discolored and for mildew or mold to develop.

These roof leaks need to be repaired and the interior roof repaired or replaced in these areas to prevent this area for mildew or mold growth to continue.

***** At time of inspection the stainless steel rack which is used to store items such as food bowls and utensils used for food preparation for the animals at the zoo has shelves which have rusted and need to be repaired or replaced to prevent contamination of the sanitized items being stored here.

***** At time of inspection the food preparation tables have lower storage shelves which holds canned food items and items used in the preparation of food. These shelves need to have the stored items removed and a complete cleaning and sanitizing needs to be conducted. These shelves should be cleaned and sanitized on a regular basis as part of the husbandry practices for this food preparation building.

TO BE CORRECTED BY: 6/4/14

This inspection and exit interview conducted by APHIS, USDA, Animal Care Personnel and the Zoo Director and his staff.

END OF REPORT.
