Type: ROUTINE INSPECTION
Date: 03-AUG-2017

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Two black four month old wolf dog hybrid (one female, one male) are in need of veterinary attention. Both appear slightly thin with ribs and spine easily distinguished. Their haircoats appear dry with hair thinning on their rear legs. In addition, one of them has some small spots of hairloss under the eyes. They are both very active and energetic. The owner reports they are eating well and that they have been vaccinated and dewormed but the only documentation available for review was their initial set of vaccinations and deworming completed prior to acquisition. A veterinarian should examine both of these young wolf-dogs to ensure that they are healthy and to determine how best to ensure their body condition remains optimal. Correct by 8/14/17.

3.131(c)

SANITATION.

The animal room housing the chinchillas, ferret and hedgehog is in need of general housekeeping. Housekeeping and husbandry items are randomly placed on the tables holding the animals and can be easily knocked over. Feed and bedding materials are scattered on the tables. They may attract unwanted pests. Trash should be cleared from the animal areas. The premises housing the animals shall be kept clean in order to protect the animals and facilitate husbandry practices. Correct by August 14, 2017.

This inspection and exit interview were conducted with owner.
