ADEPT DIESEL SERVICE

Type: ROUTINE INSPECTION
Date: 11-JUN-2018

3.26(d) REPEAT

FACILITIES, INDOOR.

Interior surfaces. There are large areas of bare wood on the floor in the guinea pig building where the paint is worn or scratched off. The floor was last sealed with white paint in the spring of 2017. The paint on the wooden floor is not holding up to daily activity such as cleaning, feeding, maintenance, and water spills. The interior building surfaces such as floors must be constructed and maintained so that they are substantially impervious to moisture and can be readily sanitized. Correct by ensuring the floor where bare wood is present is resealed or covered with an impervious surface that can be repeatedly cleaned and disinfected, and won't retain odors.

3.31(c)

SANITATION.

There were rodent droppings on top of the two racks of enclosures housing the weaned guinea pigs. There were boxes, bags, old rusty self-feeders, and cans being stored on the tops of enclosures on the left side of the building. The presence of bags, boxes, and other items being stored on tops of enclosures can create living and hiding areas for rodents and can increase the risk of disease for the guinea pig colony. In addition, there were numerous cobwebs on the ceiling, upper walls, and roof supports. Correct by ensuring the premises are kept clean, including: removing items stored on tops of enclosures to prevent pest problems, cleaning tops of enclosures of boxes, cans, bags, and empty feeders, and dusting off cobwebs from ceiling, roof supports, and upper walls to support good animal husbandry and health. Correct by June 16, 2018.

This inspection was conducted with the owner's wife and the exit interview was conducted with the owner.
