Certificate: 58-C-0460

Site: 001

ZOOWORLD ZOOLOGICAL & BOTANICAL CONSERVATORY

Type: ROUTINE INSPECTION

Date: 13-APR-2016

### 2.40(b)(2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The following medications were past the labeled expiration date: Fluoxetine 1/16, Vitamin B12 1/16, Furosemide 3/16, Neomycin/Polymyxin 12/15 (2) and 1/16 (1) and Sterile water for injections 1/16. These medications were intermingled with other products that are currently being used at the facility and are therefore ready for use. Expired drugs may not work as anticipated, could become contaminated, and could harm the animals. The applicant must ensure that all medications used in the facility are not expired, labeled properly in accordance with standard veterinary practices, and are stored in accordance with manufacturer's recommendations. Correct by April 16, 2016

### 2.131(d)(2)

#### HANDLING OF ANIMALS.

\*\* Before inspecting the giraffes outdoor pen we noticed there were two attendants, one at the giraffe stand and one in the barn. When we returned from the back of the giraffes pen the attendant for the barn and goats was in the feed room. This allowed public contact in the barn and by the goats without any attendant supervising the interactions. Once we had returned while the public attendant was feeding the goats, when he should have been monitoring the interactions of the public, the Director had to correct the public to not put a selfie stick inside of the enclosure. This public attendant should have been there the entire time of public interaction. A readily identifiable employee or attendant shall be present at all times during periods of public contact so that they can monitor and visualize public contact and, intercede when necessary. There also needs to be enough attendants available to effectively monitor all of the areas where there is public contact with the animals. This was corrected when the Director told the public attendant to return to his area before we left the area.

### 3.75(c)(1)

#### HOUSING FACILITIES, GENERAL.

\*\* In the diana guenon's outdoor enclosure there is a perch off of the side of their building that had pitted sheet metal and degraded wood. This perch is in disrepair and the structural strength could be compromised. This is not safe for the animals and could cause injury. The perches must be sturdily constructed and must be strong enough to provide for the safe activity and welfare of nonhuman primates. Correct by May 31, 2016.

## Inspection Report

---

\*\* In the red ruffed and white and black ruffed lemur encounter enclosure the night house on the right has moisture damage to the wood inside. The surfaces den box must be constructed in a manner and made of materials that allow them to be readily cleaned and sanitized, or removed or replaced when worn or soiled. Correct by May 31, 2016.

### 3.75(c)(3)

#### HOUSING FACILITIES, GENERAL.

\*\* In the outdoor enclosure for a ringtail lemur and a white and black ruffed lemur there was feces from previous days that had not been cleaned up. The facility stated that the ringtail lemur refused to shift and therefore the enclosure could not be cleaned. Hard surfaces with which nonhuman primates come in contact must be spot-cleaned daily and sanitized to prevent accumulation of excreta or disease hazards. Corrected by exit interview.

\*\* The squirrel monkey's and white faced capuchin's enclosure have several natural branch perches that have been soiled over time and need to be cleaned and/or replaced. All surfaces of housing facilities must be cleaned and sanitized when necessary and if they can't be cleaned or sanitized then they need to be replaced. If the species scent mark, the surfaces must be sanitized or replaced at regular intervals as determined by the attending veterinarian. Correct by May 31, 2016.

### 3.84(c)

#### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

\*\* In the black handed spider monkeys night house outside of there enclosure there was pest feces and debris falling out of the corner of the ceiling on to the floor around the bleach bottle. It either had not been cleaned recently or the feces and debris was falling at a fast rate. Buildings must be kept clean and in good repair in order to protect the nonhuman primates from disease and to reduce or eliminate breeding and living areas for pests, and vermin. Correct by May 14, 2016.

### 3.125(a)

#### FACILITIES, GENERAL.

\*\* In the black bears outdoor enclosure there was part of a black tarp surfacing out of the ground. This tarp needs to be remove to prevent the animals from ingesting it. The enclosure shall be maintained to keep the animals from injury. Correct by April 20, 2016.

\*\* In the porcupine's enclosure the buried fencing in the ground was surfacing and the portion in the center of the enclosure had a couple of pointy ends that need to be repaired. The enclosure shall be maintained to keep the animals from injury. Corrected by exit interview.

## Inspection Report

---

\*\* In the outdoor giraffe pen on the northwest corner of the enclosure there was fencing that had been in disrepair due to the animals stepping into it. It created holes in the fencing in which the giraffe could potentially catch an a leg and injure himself. Also there were a few strands of pointy wire from the attempts to repair that were sticking out. The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury. Corrected by exit interview.

### 3.131(c)

#### **SANITATION.**

\*\* The wolves indoor enclosure was located inside the supply shed. There was clutter and old vermin feces in the pens access area for the wolves. It also seemed as if it had not been cleaned in a while because the benches in the indoor enclosure were soiled. The buildings shall be kept clean to facilitate the husbandry practices for the health and well-being of the animals. Correct by May 31, 2016

The inspection was conducted with Greg Gaj and the Director. The exit interview was conducted with the Director.

#### **Additional Inspectors**

Gaj Gregory, Supervisory Animal Care Specialist
